## ARTHROline punches:

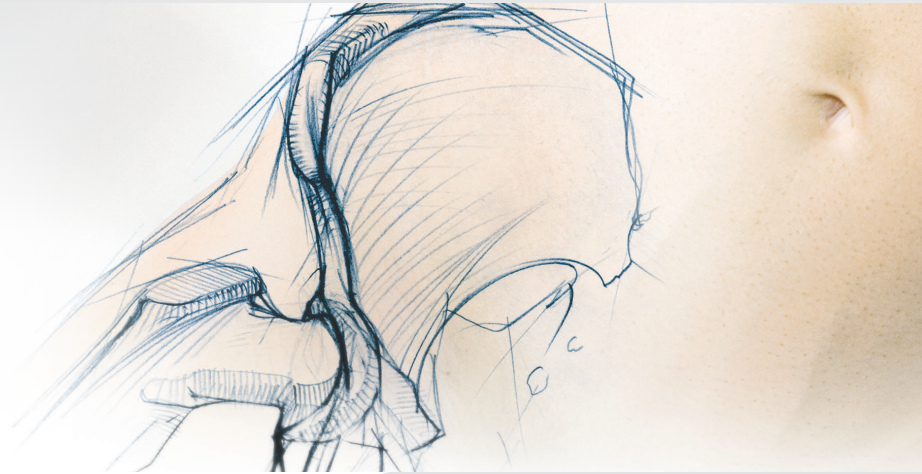

- Perfect cut
- Minimal effort
- Ergonomic handle design
- Can be dismantled

The latest generation of the established **ARTHROline** punches has been redesigned to optimize reprocessing and therefore meets the most stringent of hygiene requirements.

Thanks to a special mechanism, the push control rod can be opened up for reprocessing. This ensures that the punch is completely rinsed from all sides and all residues are safely removed. During cleaning, the push control rod is kept open using spring force – offering an effective and efficient solution.

Furthermore, no sacrifices have been made in terms of quality or performance: The high-quality dovetail joint of the jaw sections continues to ensure perfect punching results, even over a long period of time.

**There is no such thing as one perfect arthroscopy punch**

That is why our **ARTHROline** punches are available in a wide range of variants with different jaw section shapes as well as with sheaths and jaw sections which are either curved upward or downward.

A common mantra in meniscus surgery is "As little as possible, as much as necessary". To meet this requirement, it is important to have the right instruments at hand depending on the location of the lesion.

Regardless of whether the lesion is located on the posterior horn, lateral or medial meniscus, or anterior or posterior meniscus, **ARTHROline** offers the right solution to ensure perfect access each and every time.

Take a look for yourself!
